

LITTLE EXPLORER CO.

Explorer Field Missions

10 real-world discoveries to make with your Explorer Microscope. No screens. No wrong answers. Just go look.

This field kit belongs to:

Your 10 Missions

Head outside or around the house and point your microscope at the world. Check off each mission as you finish it — the weirder your find, the better.

1. Find something **OLDER** than you

A rock? A tree? Grandma's ring? Look for tiny cracks and layers.

2. Find something once **ALIVE**

A leaf, a feather, a shell. What patterns hide up close?

3. Find **THREE** textures

Bumpy, smooth, fuzzy. Which one surprised you most?

4. Find the **SMALLEST** thing

A seed? A grain of sand? Zoom all the way in.

5. Find a hidden **PATTERN**

A leaf's veins, a bug's wing, even your own fingerprint.

6. Find a **BUG** — look, don't touch!

Count its legs. How many eyes can you spot?

7. Find **SOFT** and **HARD**

Compare them at 100x. What's different up close?

8. Find something that **CHANGED COLOR**

A turning leaf, a bruised apple, a rusty nail.

9. Find something a **BIRD** would love

A worm, a berry, a shiny bit. Why that one?

10. Find a **TREASURE** no one would notice

The stranger, the better. This discovery is yours.

Draw What You Found

Sketch four of your discoveries the way they look through the microscope, then name each one.

Discovery 1

What is it? _____

Discovery 2

What is it? _____

Discovery 3

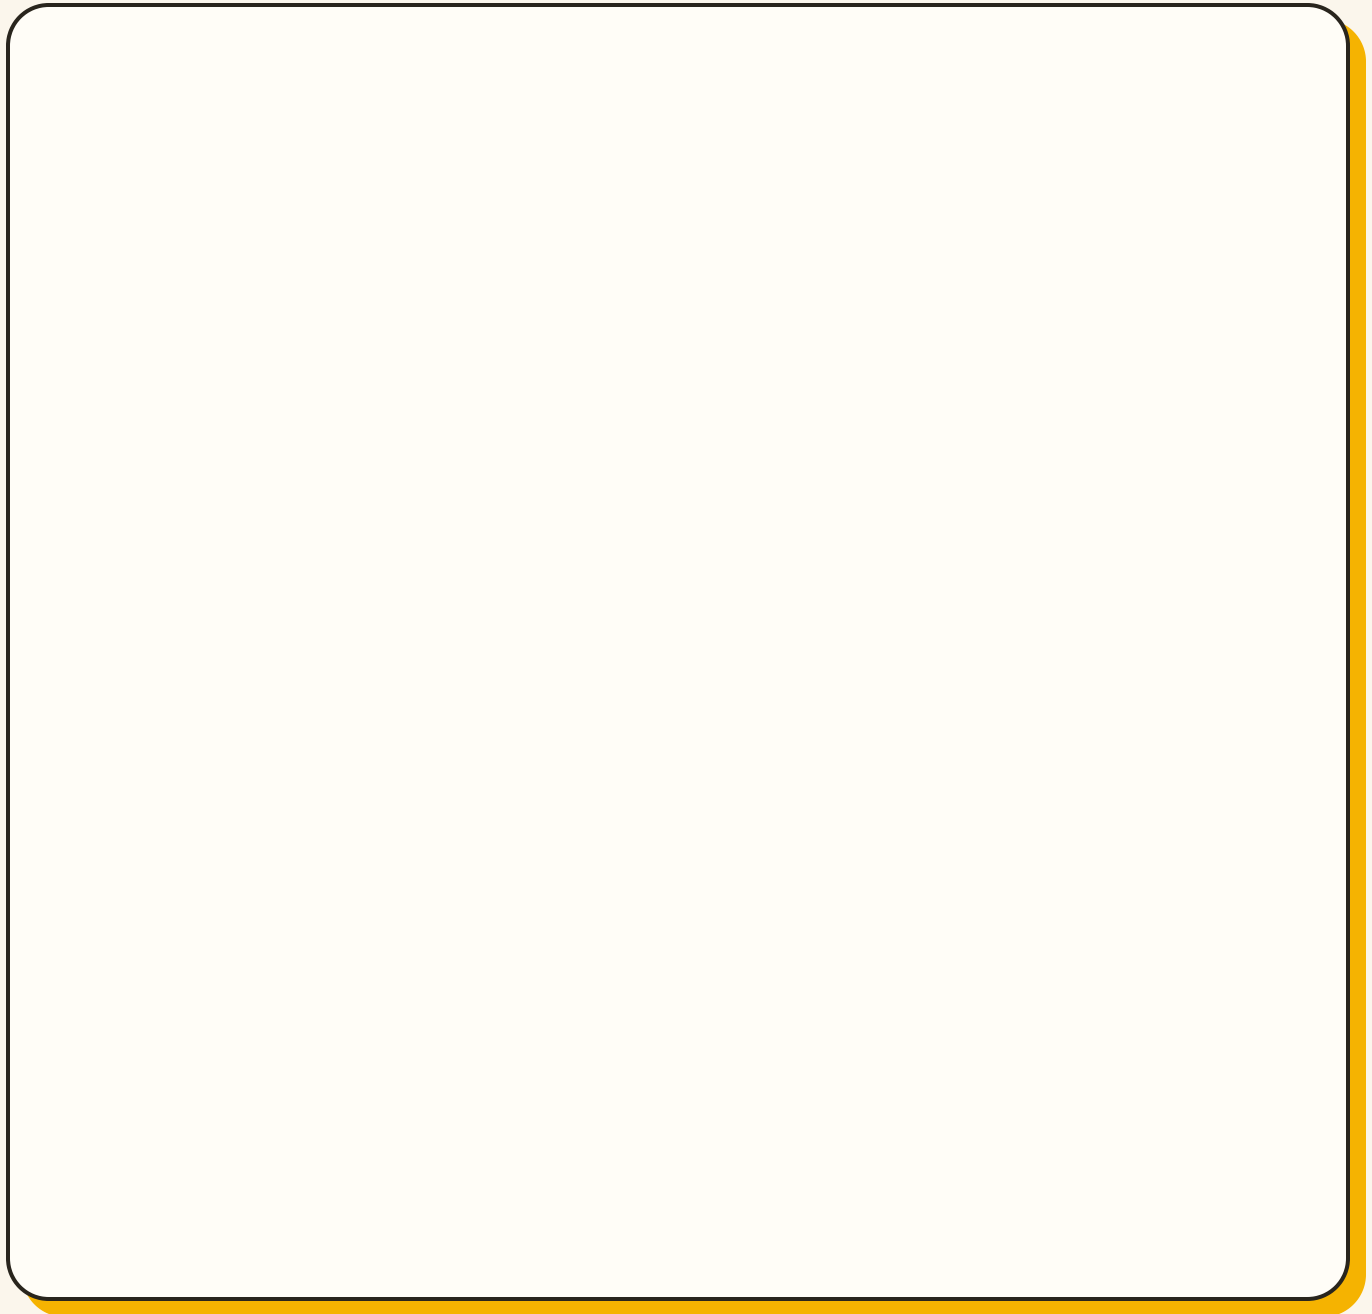

What is it? _____

Discovery 4

What is it? _____

My Best Discovery

Found something amazing? Draw it big, then tell us all about it.

Where did you find it?

.....
.....

What does it look like up close?

.....
.....

Why is it your favorite?
